The Warsaw Declaration for Provision of EACS Guidelines in Central and Eastern Europe

6th February 2016, Warsaw, Poland

In recognition of the necessity to build regional capacity in improving HIV care and preventing HIV transmission the undersigned hereby declare their will to promote programs, projects and activities promoting the widespread use of antiretroviral treatment for HIV infection in the Central and Eastern Europe region and neighbouring countries, and to remain in conformity with the provisions of EACS guidelines.

The undersigned wish to underline that the key role in the process of scaling up antiretroviral treatment, as the most effective strategy to reduce mortality/morbidity and to stop HIV transmission, belongs to governmental and policy-making agencies. Therefore we call these stake-holders to action in supporting national capacity in this area by more concise and proactive fundraising and immediate allocation of already existing resources.
